SMITH METER® PD ROTARY VANE METER

The Smith Meter® Model F4 Meter is a 4", double-case, straight-through rotary vane, positive displacement meter. Applications include: blending, batching, dispensing, inventory control, and custody transfer of oils, solvents, chemicals, paints, fats, and fertilizers.

FEATURES

- » **Superior Accuracy** – The Smith Meter® Rotary Vane Meter principle, combined with the meter’s uniquely designed (offset) inlet and outlet nozzles, minimizes pressure drop across the measuring chamber, which reduces flow through meter clearances (slippage), to maximize accuracy.
- » **Low Pressure Drop** – Streamlined flow path provides low pressure drop.
- » **Positive and Accurate Registration** – High torque drive calibrator with adjustment in 0.05% increments ensures accurate registration.
- » **Long Service Life** – Low friction ball bearings, fixed cam-type timing, and rugged construction give sustained accuracy and long service life.

OPTIONS

- » **High Viscosity Meter Clearances** – To extend operation at maximum flow rate from 400 mPa•s to 2,000 mPa•s.
- » **High Temperature Clearances** – To extend operating temperatures from 150°F to 200°F (65°C to 93°C).
- » **All Iron Trim** – For operating temperatures above 200°F (93°C).
- » **LPG Trim** – For low lubricity liquids such as LPG.
- » **NACE Construction** – Special components available to meet requirements of NACE Standard MR-01-75

1 Intermittent rating applies to service on clean, refined products where continuous operation is not required (e.g., truck loading, rail loading, and other batching applications).
 2 Linearity based on a maximum flow rate of 600 USGPM (2,250 L/min) unless otherwise stated.
 3 Linearity based on a maximum of 500 USGPM (1,875 L/min).
